Garhi Shahu, Lahore

SUMMARY

Computer Science student at UET Lahore (CGPA: 3.4/4.0) who builds complete, full-stack products end-to-end – data model to deployment – across the MERN stack, Next.js, and Django/Flask, with applied computer vision and NLP work including a published research paper. Also experienced in Android development. Seeking a Full-Stack Developer / Software Engineer role.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C++, SQL, C#, HTML, CSS

Frontend: React, Next.js, Tailwind CSS, Responsive Design

Backend: Node.js, Express.js, Django, Flask, FastAPI, REST API Design, JWT Authentication

Databases: MongoDB, PostgreSQL, MySQL, Firebase, Supabase

Mobile Development: Android, Kotlin, Java, REST API Integration

AI / ML & Computer Vision: PyTorch, TensorFlow, Scikit-learn, YOLOv8, OpenCV, EasyOCR, LSTM / Sequence Models, NLP

Tools & Practices: Git, Docker & Docker Compose, GitHub Actions CI, Postman, Swagger/OpenAPI, n8n Workflow Automation, Cloudinary

Testing & Real-Time: Jest, Supertest, Socket.io

Core CS: Data Structures & Algorithms, OOP, DBMS

PROJECTS

DevFlow – Collaborative Project Management Platform 2026

- Built full-stack project management platform (MongoDB, Express.js, React, Node.js) with multi-tenant workspaces, drag-and-drop Kanban boards, and threaded task comments
- Implemented JWT auth with refresh tokens, RBAC, and Socket.io real-time notifications; containerized with Docker Compose and documented APIs with Swagger/OpenAPI

WorkPulse – AI-Powered Productivity Monitoring Platform 2025-26

- Built full-stack productivity platform using Flask, Supabase (PostgreSQL), and n8n workflow automation with manager/employee role-based dashboards
- Built an EasyOCR-based document intake pipeline (95% accuracy) and an AI assistant surfacing productivity insights from activity data

VisionTrack – Real-Time Object Detection & Tracking 2026

- Built a desktop computer vision app using YOLOv8 and OpenCV for real-time multi-class object detection and tracking across image, video, and live webcam input
- Designed a CustomTkinter GUI exposing configurable detection settings for non-technical users

Graph Database Engine – From-Scratch Graph DB with Query Language 2024

- Built a graph-native database engine from first principles with a custom Cypher-like query language and ACID-compliant transactions
- Exposed the engine via a FastAPI backend and an interactive Streamlit graph visualizer

GameHub – Android Gaming Application 2026

- Developed Android app with 7 interactive games (Kotlin, Firebase Auth/Firestore) sharing one account, cloud-synced profiles, and global leaderboards

RESEARCH & PUBLICATIONS

AI-Based Depression Detection from Social Media Using LSTM Networks 2025

Published, DOI-registered research paper on Zenodo (zenodo.org/records/21265208); designed an end-to-end NLP + LSTM pipeline to classify depression-indicative social media text.

EDUCATION

Bachelor of Science in Computer Science 2023 – 2027

University of Engineering and Technology (UET), Lahore CGPA: 3.4 / 4.0

Intermediate (FSc Pre-Engineering) 2021 – 2023

PGC Shalamar Campus, Lahore

RELEVANT COURSEWORK

Web Development, Object-Oriented Programming, Data Structures & Algorithms, Advanced DBMS, Mobile Application Development, Software Project Management, Machine Learning, Artificial Intelligence, Computer Vision
